

The Creation of a futuristic being from the clone technology, combined with the smallest NANO electronic technology, and the liquidity mass make-up of the human body, became necessary to research and explore.

In the year 1939, when the brilliance of the Hoover Dam research center came online, the Scientific Intelligence unit of the Government, and the FDA realized that the World's soils were becoming depleted and contained less and less of the vitals needed to sustain life on the earth.

Though all the years of experimentations and space research data, plus the acceleration of the global warming effects, maximum priority was placed on the development of the CODE FILE "©the L. A.Z.E.R.U.S. project."

...He tossed his head in several directions, as to get a better hearing of it, and what it was, and he then instinctively launched his body into the air and jetted off super fast towards the sound. So quickly did he jet off into the distant sight and was gone from the normal human sight that even the guards never had time to react. Each of them just stood there, flexed, with their weapons poised, but nothing to use them for. LAZERUS, reaching the airspace of the commercial airliner, looked with amazement at it as he slowed his flight to the speed of the plane. He flew beside it for a bit, just below the underside of the plane, then zoomed to the back, and front of it, then up over the top of it...

*LAZERUS cannot be burned away – Steam rises into the air to become moisture.
(He can be resurrected.)*

*LAZERUS cannot be frozen away – Too much moisture again.
(He can be resurrected.)*

Trying to gun down or blow up LAZERUS is useless – His restructuring molecular zenoplasmic structure will only change to a "FLAMED-ON" version of himself.

LAZERUS has only one weakness...

the L.A.Z.E.R.U.S. project

the MAN Made Scientific SUPER HERO
